

Carriage Roller

Carriage Roller - Carriage rollers are particularly designed bearings which are utilized on lift masts in order to help them function in difficult environmental surroundings. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This equipment is regularly exposed to environmental influences like for instance cold, heat, dust, aggressive ambient air, moisture and contamination. Thus, the guidance arrangements of lift masts need to be particularly strong and have a specific high load carrying capacity.

In order to help compete in lots of various environmental surroundings, carriage rollers were designed for many lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
